Custom Blinds - How to measure

FREE home measuring in Liverpool - Wed & Sun, 4-7pm. Book by Messenger or call 07740551187. We measure, so you can't get it wrong.

Tools: steel tape measure, pen and paper, step ladder.

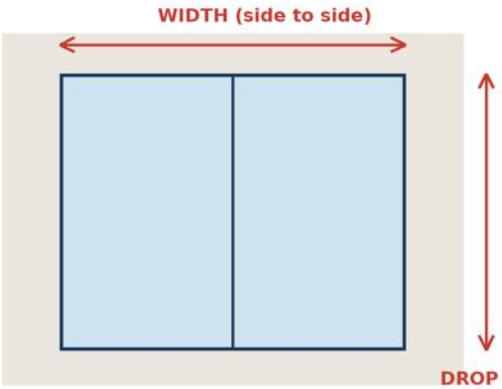

INSIDE the recess: measure width at top, middle, bottom and drop at left, middle, right.
Use the SMALLEST of each. We make to that exact size - nothing added or deducted.

OUTSIDE the recess: measure the area to cover; we suggest 3-4in (8-10cm) extra each side and above.

Write WIDTH first, then DROP, e.g. 36 1/2" x 48". Inches to the nearest 1/4, 1/2, 3/4 - or cm.

You are responsible for accurate measurements. Blinds are made to the size you give us and we cannot remake free of charge for wrong measurements. Measure twice!

Width x Drop

Always write width first, then drop. e.g. 36 1/2" x 48" or 92.7cm x 121.9cm

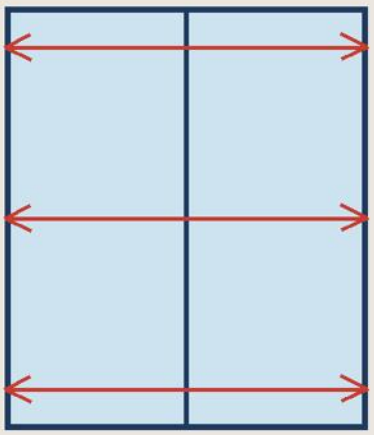

Writing your sizes

Inches: nearest 1/4, 1/2 or 3/4 (e.g. 35 3/4"). Or centimetres (e.g. 90.8cm).
Please don't mix the two in one size.

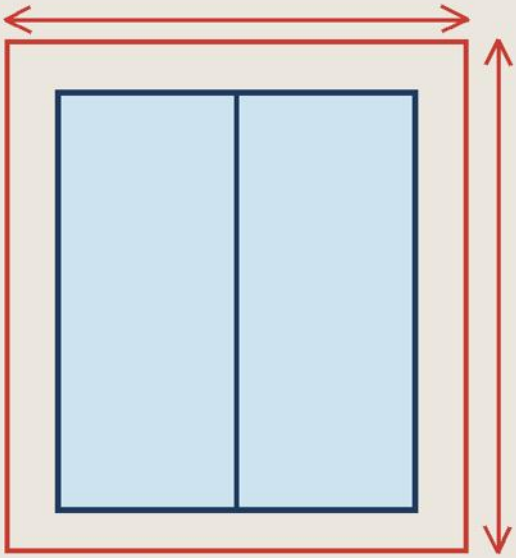

Inside the recess vs Outside the recess

INSIDE (recess fit)

Measure width at top, middle, bottom.
Use the SMALLEST. We make to that size.

OUTSIDE (face fit)

Add overlap each side and above/below (we suggest about 3-4in / 8-10cm) so it covers the frame and blocks light gaps.
